Menu & Inventory

For juice bars, cafés & small kitchens

Know what every drink costs, what to reorder, and who's on shift.

One simple system that connects your menu, ingredients, suppliers, deliveries and staff, with a sign-in for everyone and a live Excel copy of it all.

HOW IT WORKS

01
Build your menu
Click ingredients into each recipe. Cost, margin, food-cost % and allergens appear instantly.

02
Bring in sales
Import each day's sales from your till, or ring them up here. Every drink deducts its ingredients.

03
Reorder & receive
Low items land on a supplier-ready order list, and deliveries are checked in item by item.

04
Count & schedule
Weekly counts show what went missing; drag shifts into place and watch labor cost.

10 tools
menu, costing, ingredients, till import, ordering, receiving, counts & waste, scheduling, dashboard and Excel

Live Excel
a workbook with working formulas, updated after every change

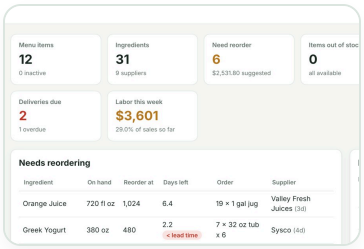

Own logins
staff, manager and owner access, with automatic daily backups; runs in any browser

Everything a busy counter needs, in one place

Screens shown are from the working system, loaded with a sample juice bar: 12 drinks, 31 ingredients, 9 suppliers and 6 staff.

1 Live dashboard

- Reorder alerts, with days of stock left
- Deliveries due, waste and labor this week
- Ingredient price changes and drinks over your food-cost target

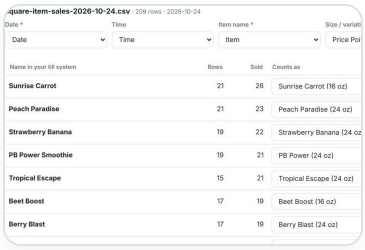

2 Menu builder & allergens

- Photo, description and recipe in minutes
- Live cost, margin and a price for your target
- Allergens rolled up from every ingredient

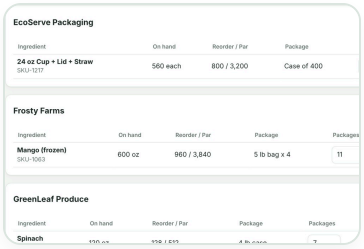

3 Ingredients & suppliers

- Pack size, cost, shipping, lead time, shelf life
- Usable yield for trimmed produce: true cost per oz
- Which drinks use each ingredient

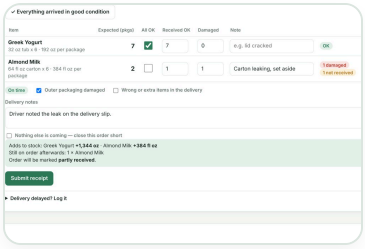

4 Till sales import

- Load the daily export from Square, Toast or Clover
- Item names matched once, then remembered
- Refunds skipped; duplicate files blocked; undo

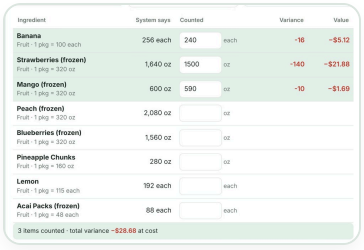

5 Ordering

- Reorder list grouped by supplier
- Packages to refill to par, with order totals
- Purchase orders with expected delivery dates

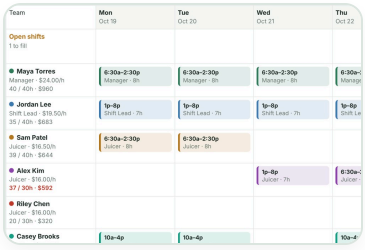

6 Receiving deliveries

- Check each item off against the order
- Log damage, shortages, late or wrong deliveries
- Good items go into stock; missing ones stay on order

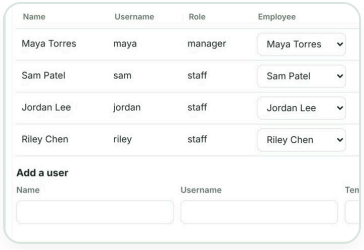

7 Counts & waste

- Shelf counts against what sales say is left
- Variance in units, dollars and % of usage
- Waste logged by reason, with its cost

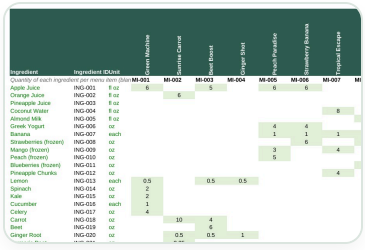

8 Staff scheduler

- Drag-and-drop weekly schedule; copy last week
- Flags overtime, double-booking and open shifts
- Labor cost and labor % of sales by day

9 Sign-in, roles & backups

- Everyone has their own login
- Staff, manager and owner access; managers reset staff passwords
- Automatic daily backups, plus a full download

10 Live Excel workbook

- Updated after every change, with live formulas
- Where-used matrix, counts, waste, weekly hours
- Edit in Excel and import changes back
