Menu & Inventory

Staff guide

Everything you need for a shift: signing in, recording sales, checking allergens, receiving deliveries, counting stock, logging waste and checking your schedule. Keep it by the counter.

Before you start

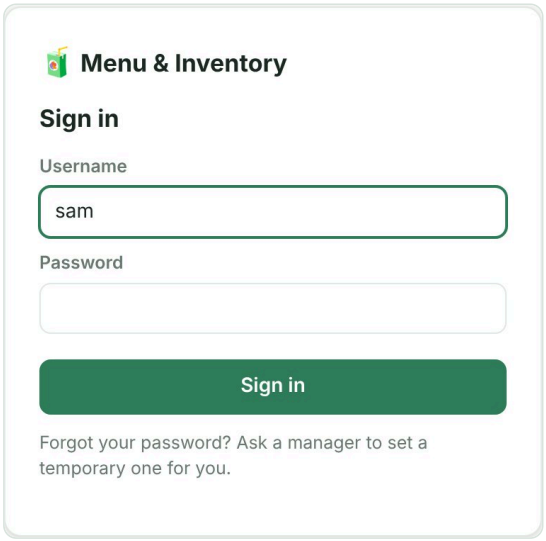

Your manager gives you a **username** and a **temporary password**, and tells you the app's address (on the shop tablet it is usually already bookmarked). If anything in this guide looks different on your screen, ask your manager.

1 Signing in

1. Open the app on the shop tablet or computer. If you are not signed in you will see the **Sign in** box.
2. Type your **username** and **password**. Usernames are not case-sensitive; passwords are.
3. Tap `Sign in`. You start on the **Record Sales** tab.

"Wrong username or password"

Check caps lock and try again. After **5 wrong tries** the app makes you wait **5 minutes** before trying that username again. If you still can't get in, see **Forgot your password?** below.

The sign-in box.

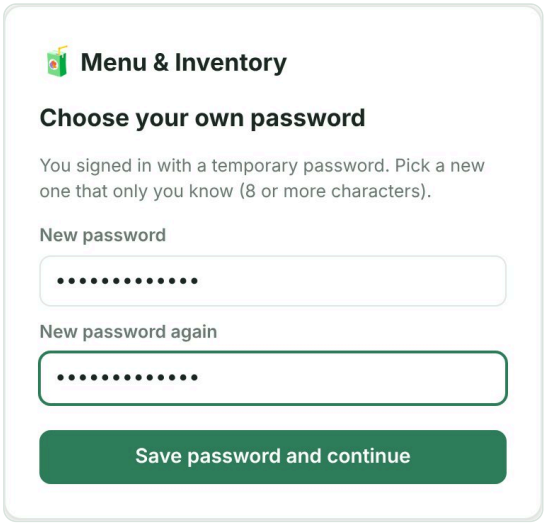

2 Your first sign-in: choose your own password

The first time you sign in with a temporary password, the app asks you to choose your own before you can do anything else.

1. Type a new password: **at least 8 characters**, and different from the temporary one.
2. Type it again in **New password again**.
3. Tap `Save password and continue`.

Keep it to yourself

Everything you do is recorded under your name: sales, deliveries you receive, counts and waste. Never share your password or sign in for someone else.

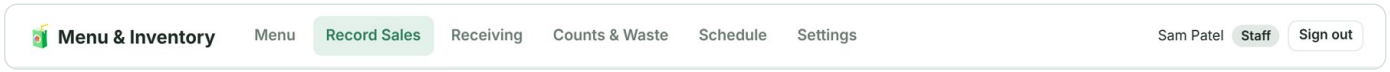

Choosing your own password.

3 Forgot your password?

1. Ask a **manager** (or the owner). Nobody can look up your old password; they set a new **temporary** one for you.
2. Sign in with the temporary password they give you.
3. The app asks you to choose your own password, exactly as on your first sign-in (section 2).

> **Locked out after too many tries?**
> A new password doesn't lift the 5-minute wait. Wait 5 minutes, then sign in with the new one.

4 Finding your way around

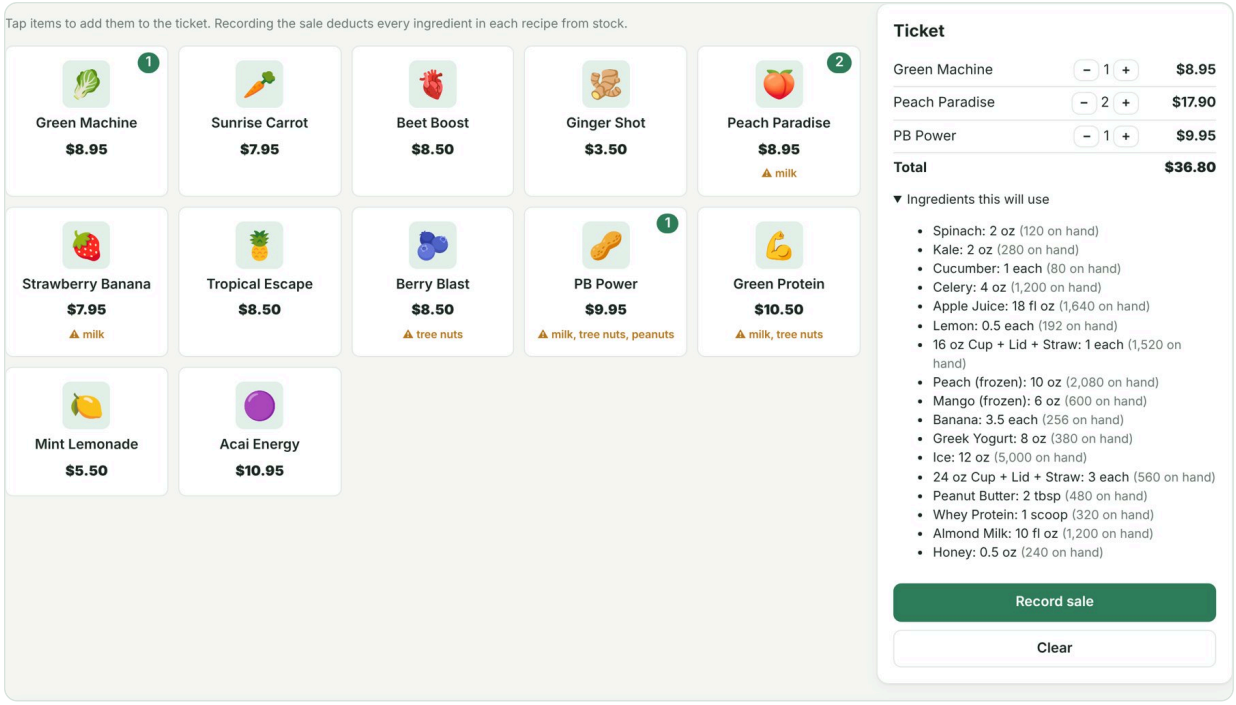

The tabs along the top, with your name and **Sign out** on the right.

Tab	Use it to
Menu	See every drink, its ingredients and its **allergens**.
Record Sales	Ring up drinks so their ingredients come out of stock (if your shop does this here; see section 5).
Receiving	Check in a delivery against its order.
Counts & Waste	Count what's on the shelf, and log anything thrown away, spilled, remade or given away.
Schedule	See who is working when, including your own shifts.
Settings	Change your password.

5 Recording a sale

> **Ask your manager first**
> Many shops bring sales in automatically from the till system each day. If yours does, **don't** also record sales here, or every drink is counted twice and stock goes wrong.

1. Open **Record Sales**. Tap a drink to add it to the **Ticket**; tap again for another. A green number shows how many are on the ticket.
2. Fix mistakes on the ticket with `−` and `+`, or tap `Clear` to start over.
3. Optional: open **Ingredients this will use** to see exactly what comes out of stock.
4. Tap `Record sale`. The ingredients are deducted straight away.

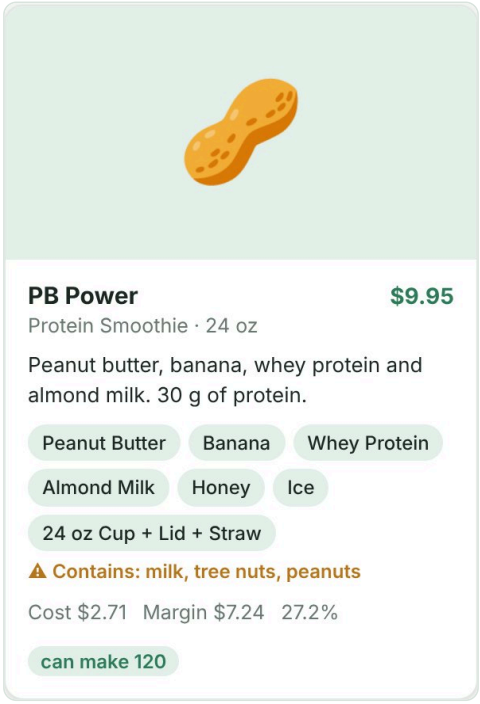

Three drinks on the ticket. Allergen warnings (⚠) show under drinks that contain them. A faded button means the shop has run out of something that drink needs.

6 When a customer asks about allergies

Every drink that contains one of the nine major allergens shows a ⚠ **Contains:** line on the **Menu** tab and under its button on **Record Sales**. The list comes from the drink's ingredients.

1. Open **Menu** and find the drink (use the search box).
2. Read the **Contains** line, and the ingredient list above it.
3. Tell the customer what it contains. If they have a serious allergy, follow your shop's allergy procedure.

> **The app can't see the blender**
> It lists what is *in* the recipe. It does not know about shared blenders, scoops or cross-contact. Never promise a drink is "allergen-free".

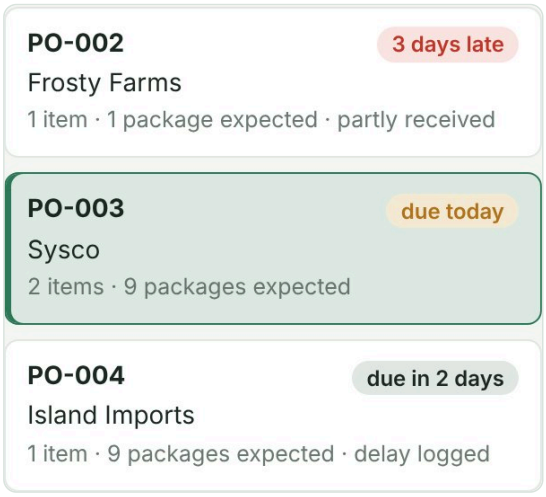

PB Power contains milk, tree nuts (almond milk) and peanuts.

7 Receiving a delivery

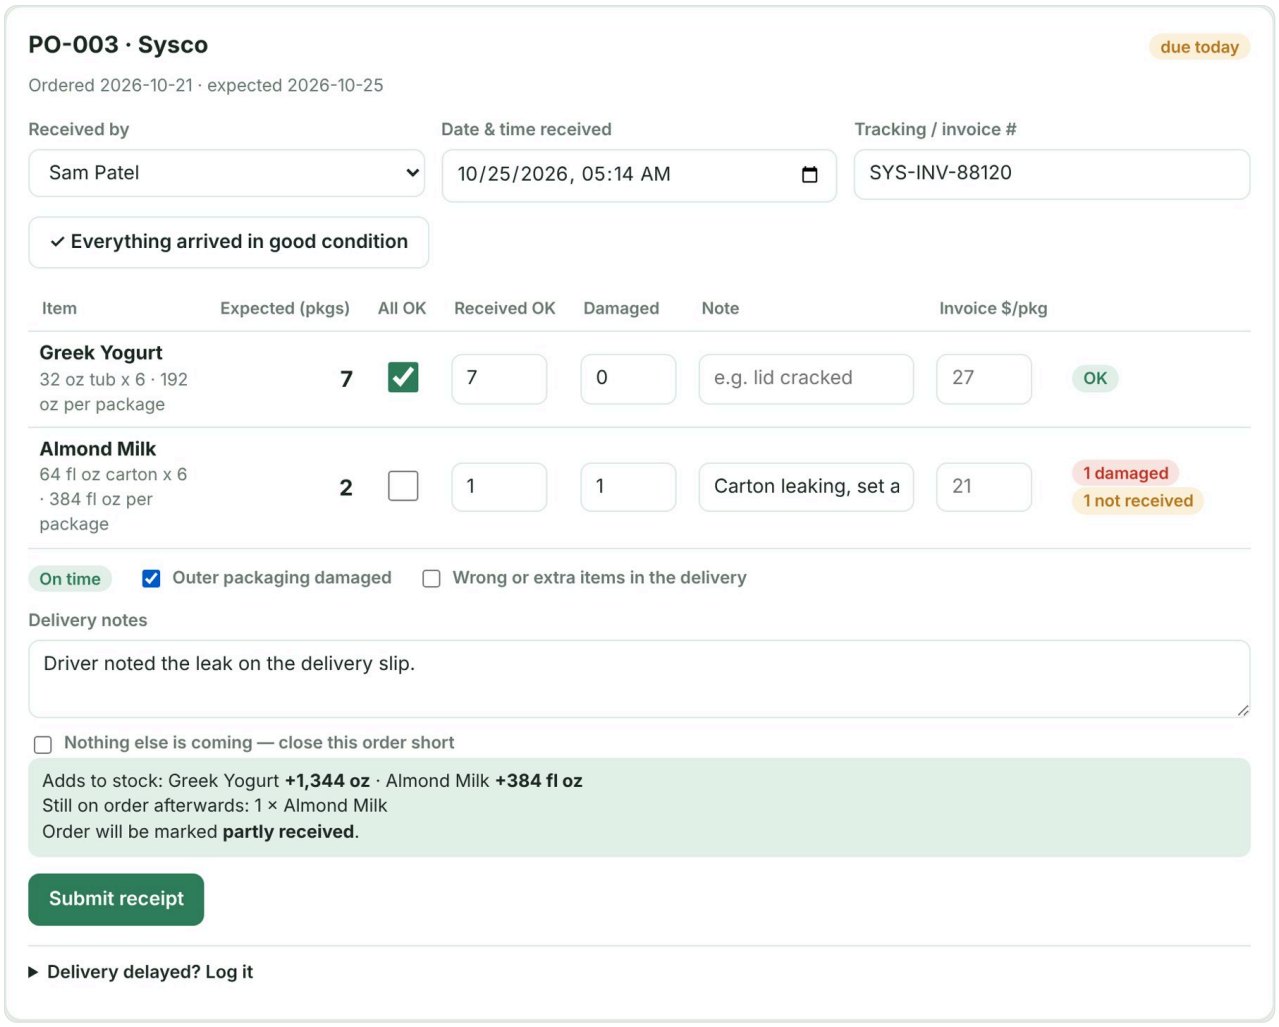

When a delivery arrives, check what's actually in the boxes against the order before you put it away.

1. Open **Receiving**. Expected orders are listed on the left with a badge: **due today**, **due in 2 days**, or **3 days late**.
2. Tap the order that matches the supplier's packing slip or invoice (search by order number, e.g. **PO-003**, or supplier name).

Orders waiting to be received.

3. Choose your name in **Received by**. The date and time fill in by themselves. Type the **tracking or invoice number** if there is one.
4. For each item, count the packages:
   - Everything there and in good shape: tick **All OK**. (If the whole delivery is fine, tap `✓ Everything arrived in good condition`.)
   - Something missing or damaged: type how many arrived **OK** and how many are **Damaged**, and add a short **Note** (e.g. "carton leaking").
5. Tick **Outer packaging damaged** or **Wrong or extra items** if that applies, and add anything else in **Delivery notes**.
6. Read the green summary: what will be added to stock, and what is still on order.
7. Tap `Submit receipt` and confirm.

Yogurt all OK; almond milk 1 OK and 1 damaged. The missing carton stays on order, so the order shows as **partly received**.

Situation	What to do
Some items didn't come	Enter only what arrived. The rest stays on order and the order stays in the list, so the next delivery can be checked in against it.
Damaged items	Count them as **Damaged**, not OK. Damaged items are not added to stock. Keep them aside and photograph them if your manager asks.
"Nothing else is coming — close this order short"	Only tick this if your manager or the supplier says the missing items won't be sent.
Invoice $/pkg column	Leave blank unless your manager asks you to copy in a price from the invoice.

The delivery is late

Open the order, tap **Delivery delayed? Log it**, write what happened (e.g. "supplier called, truck a day late"), set the new expected date, and tap `Log delay`.

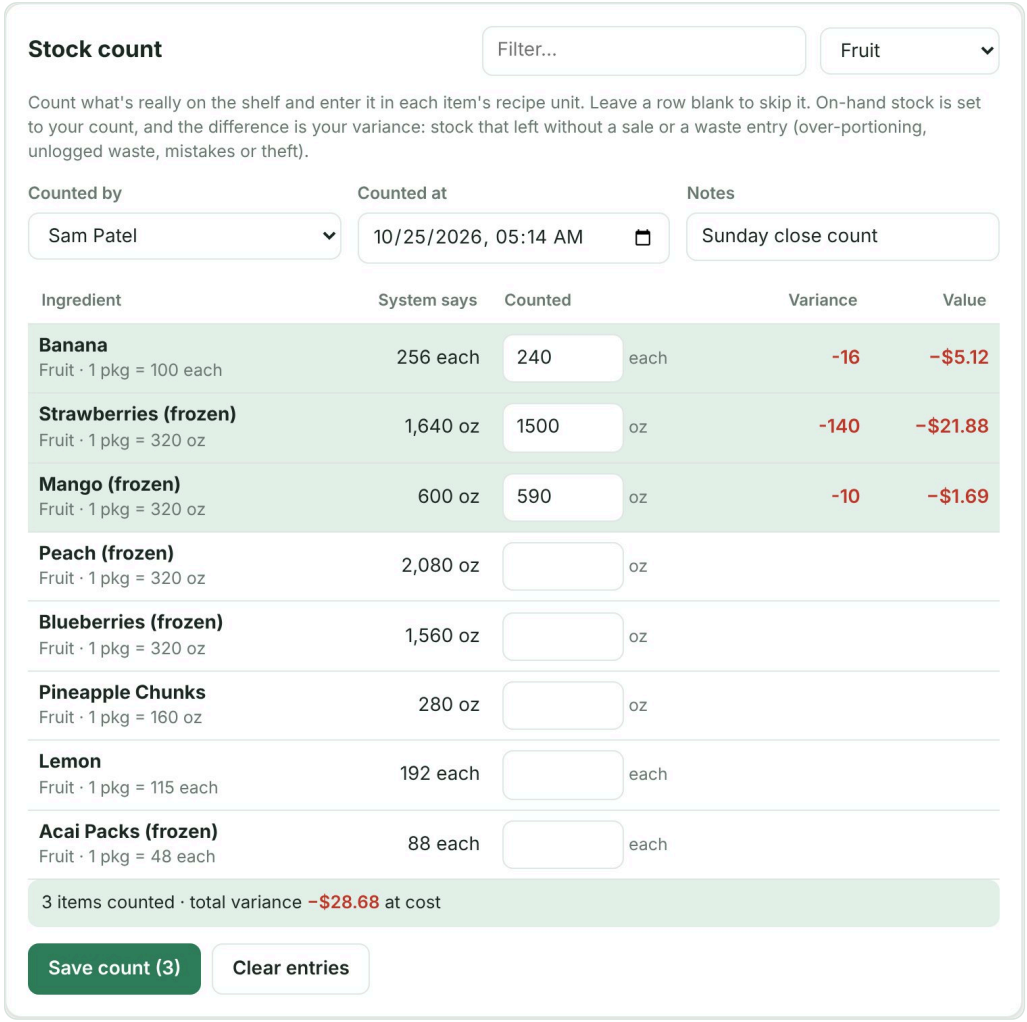

8 Counting stock

Your manager will tell you what to count and when (often a few high-value items at closing).

1. Open **Counts & Waste**. Check your name in **Counted by**; add a note such as "Sunday close count".
2. Use the category list or the filter box to find the items you are counting.

3. Count what is really on the shelf and type it in the item's unit (oz, fl oz, each…). The grey line shows how much is in one package, e.g. **1 pkg = 320 oz**: 3 full bags plus a half bag = 960 + 160 = **1,120 oz**.
4. Leave items you didn't count **blank** (not 0). Blank means "skipped"; 0 means "none left".
5. Tap `Save count` and confirm.

Three fruit items counted. Red numbers show stock that left without a sale or a waste entry.

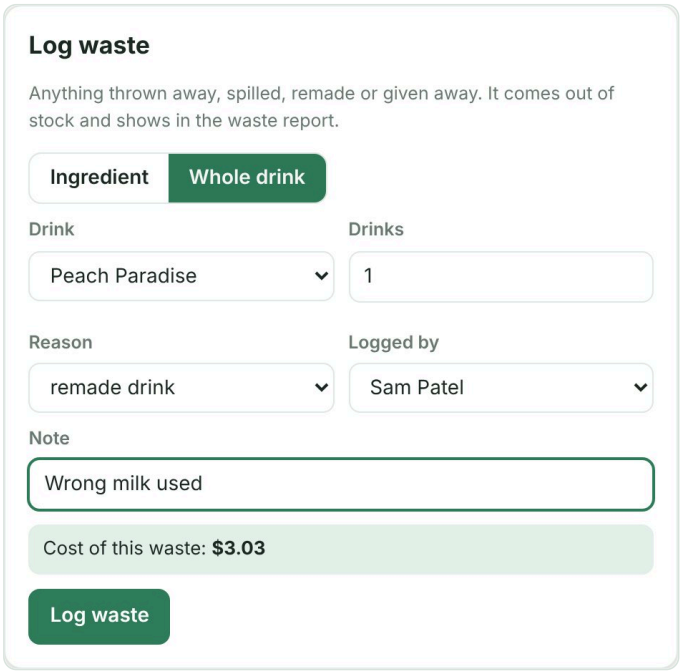

Count what you see
Don't adjust your count to match "System says". The difference is exactly what the manager needs to know about.

9 Logging waste

Log anything that leaves stock without being sold, as soon as it happens.

1. On **Counts & Waste**, choose **Ingredient** (e.g. a bag of spinach) or **Whole drink** (e.g. a remade smoothie).
2. Pick what it was and how much (in the unit shown, or number of drinks).
3. Pick the **Reason**, check **Logged by**, add a note if useful.
4. Tap `Log waste`.

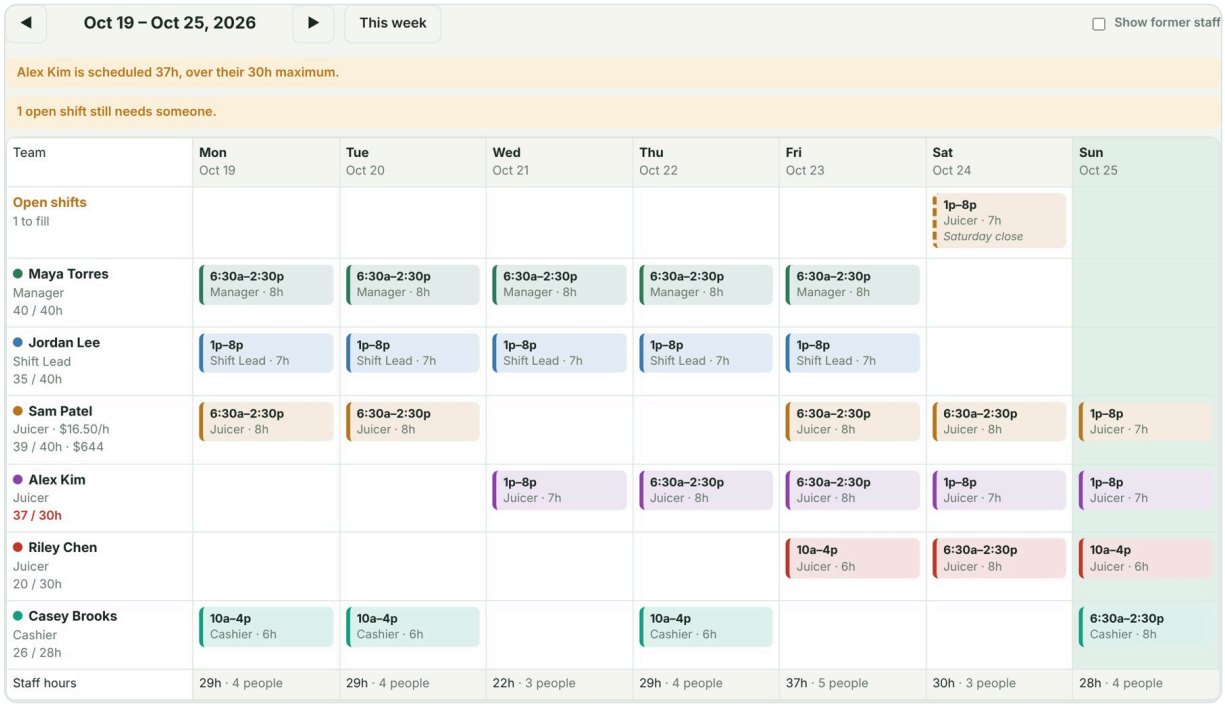

Reason	Use for
expired / spoiled	Past its date, gone off
spilled / dropped	Accidents
remade drink	Made wrong and remade
staff drink	Drinks for staff
free / comped drink	Samples, giveaways, apologies
damaged, prep trim, other	Anything else (add a note)

A remade Peach Paradise. Logging a whole drink takes all of its ingredients out of stock.

10 Checking your schedule

Open **Schedule**. Each person has a row and each day a column. Use ◀ and ▶ to change week and `This week` to come back. Shifts in the **Open shifts** row still need someone: tell your manager if you can take one. Only managers can change the schedule.

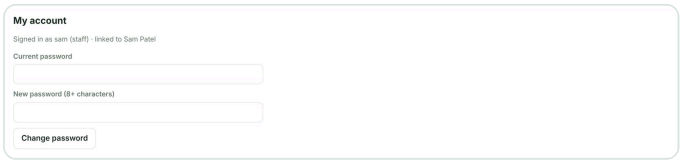

The schedule as staff see it. Your own hourly rate shows on your row; other people's don't.

11 Changing your password and signing out

Change your password

1. Open **Settings**.
2. Under **My account**, type your current password and a new one (8+ characters).
3. Tap `Change password`. Any other device you were signed in on is signed out.

Sign out

Tap `Sign out` at the top right. **Always sign out of a shared tablet** at the end of your shift, so nobody else works under your name.

12 If something goes wrong

You see	What it means / what to do
The sign-in box appears in the middle of a shift	You were signed out (12 hours without using the app, or the app was restarted). Sign in again; nothing you saved is lost.
"Too many attempts. Wait a few minutes"	5 wrong passwords. Wait 5 minutes, then try again or ask a manager to reset your password.
"Choose a new password first"	You are on a temporary password. Reload the page and the app will ask you to choose your own.
"This needs a manager account"	That action is for managers. Ask one.
You recorded a sale, count or delivery by mistake	Tell a manager straight away, with what you entered. A wrong waste entry can be removed by a manager.
A drink button is faded	Stock says something it needs has run out. Check the shelf and tell a manager.

Quick reference

Every shift

- [ ] Sign in with **your own** account
- [ ] Check allergens on **Menu** before answering allergy questions
- [ ] Log waste as it happens (**Counts & Waste**)
- [ ] **Sign out** at the end of your shift

When a delivery arrives

- [ ] **Receiving** → pick the matching order
- [ ] Choose your name; add the invoice number
- [ ] Tick All OK, or enter OK / Damaged with a note
- [ ] Check the summary → **Submit receipt**

When counting

- [ ] Count in the unit shown (1 pkg = ...)
- [ ] Blank = skipped, 0 = none left
- [ ] Count what you see, don't match the system

Passwords

- [ ] 8+ characters, only you know it
- [ ] Forgot it? A manager sets a temporary one
- [ ] Change it: **Settings → My account**
- [ ] 5 wrong tries = wait 5 minutes
